NUMBER 3

CATALOGUE and PRICE LIST
of the
CALIFORNIA NURSERY CO.

INCORPORATED 1884

Medal awarded California Nursery Co., Paris Exposition 1900

**FRUIT AND ORNAMENTAL TREES
EVERGREENS, PALMS, ROSES, ETC.**

1904-1905

NILES, CALIFORNIA

FIVE HUNDRED ACRES

TO CORRESPONDENTS.

1st. This Catalogue cancels all previous prices, either in special lists, offers or catalogues. This rule will be strictly observed.

2d. All orders should be sent in as early as possible.

3d. Orders should be legibly written on a separate sheet and not mixed up in the body of the letter, thereby saving us a great deal of trouble and tending to prevent mistakes.

4th. The articles in the following list will be furnished at the annexed prices **only** when the quantity specified shall be taken. **Fifty**, however, will be furnished at the **hundred** rate, and **five** at the **ten** rate. In no case does this mean so many trees of assorted classes, but refers only to **one class** of assorted varieties, for instance, 5 Apples, or 5 Pears, or 5 Plums, of different varieties, but not 2 Apples, 2 Pears and 1 Plum.

5th. Where particular varieties are ordered, and particular ages and sizes of trees, kind of stock, etc., it should be stated whether, and to what extent substitution will be allowed in case the order cannot be filled to the letter. Where no instructions in this respect accompany the order, we shall feel at liberty to substitute other varieties as nearly similar as possible. If the selection of varieties is left **entirely** to us, we shall endeavor to send only such sorts as are acknowledged to give general satisfaction.

6th. All trees and plants are carefully labeled, and securely packed in the best manner, for which a moderate charge, sufficient to cover cost of material only, will be made; but no charge is made for the delivery of packages at the railroad or express offices at Niles.

7th. It is requested that explicit directions for marking and shipping packages accompany each order. When it is left for us to choose the mode of conveyance, we will exercise our best judgment; but as all articles are at the risk of the purchaser after being shipped, we must not be held responsible for any loss or delay that may occur through the negligence of the forwarders.

8th. We warrant all trees and plants to be good, thrifty and true to label, but having no control over the planting or care after delivery to the buyer, we will not be responsible in any other direction than as stated, and accordingly if any tree or plant should prove untrue to kind, we will either replace the same or refund the amount paid; but in no case will we be liable for any sum greater than that originally paid, and this statement is due notice to buyers of the extent of our responsibility for trees and plants after delivery of the same shall have been accepted by the buyer.

9th. Our customers are requested to notify us immediately of any errors that may be committed in filling their orders, so that we may at once rectify the same, as we desire to conduct our business in all respects satisfactorily to those who favor us with their confidence.

10th. Orders from unknown correspondents **must** be accompanied by the cash or satisfactory reference. Orders to be sent C. O. D. **must** be accompanied by at least one-half the amount in cash; otherwise they will receive no attention.

11th. Remittances may be made by draft on San Francisco, or Wells, Fargo & Company and postoffice money orders on Niles, or cash by express, prepaid.

All communications to be addressed to

CALIFORNIA NURSERY COMPANY,

Niles, California.

REMARKS

We have pleasure in submitting herewith our price-list for the coming season (twentieth edition). It is our aim and intention, as hitherto, to supply only the best stock at the lowest prices, and the stock in hand for the new season is larger and more varied than ever before. We invite all to visit the Nursery, which is the largest, by far, of any on the Pacific Coast, whether as intending purchasers, or otherwise. *If parties will notify us of the time of their arrival at Niles, we will have conveyance at station to meet them.*

To reach our Nursery from San Francisco, take the broad gauge ferry-boat for Oakland, leaving at 8:00, 8:30 A. M., and 12:00 M., and 3:30, 4:00, 4:30, 5:30 and 6:00 P. M. These make close connections with through trains direct to Niles. From Sacramento and all points centering there, the train leaving at 10:15 A. M. for San Francisco, *via* Lathrop, Tracy, Livermore, etc., should be taken. From San Jose and its southern connections, trains leaving at 5:15, 6:15, 8:40 and 9:30 A. M., and 12:35 and 4:35 P. M.

CALIFORNIA NURSERY COMPANY.

Niles, November 1st, 1904.

OFFICERS:

WM. J. LANDERS, President,
JOHN H. HENN, Secretary,

H. W. MEEK, Vice-President,
CENTRAL BANK, Oakland, Treasurer,
W. V. EBERLY, Manager.

DIRECTORS:

WM. J. LANDERS, San Francisco,
HARRY W. MEEK, San Lorenzo,
EGBERT B. STONE, Elmhurst,

W. G. PALMANTEER, Oakland,
A. C. HAMMOND, JR., San Francisco,
JOHN H. HENN, San Francisco,
F. W. HOSMER, San Francisco.

JOHN ROCK

Our beloved Manager has passed into the Great Unknown. A familiar name and figure has gone—a man and friend of sterling qualities is no more; one in whose judgment and abilities vast numbers of people and even governments have securely rested in horticultural matters can advise no longer.

WE MOURN HIS LOSS.

HINTS ON TRANSPLANTING

The many excellent treatises on Fruit Culture which have appeared within the past few years—one or more of which should be in the hands of every person intending to plant—render it almost unnecessary to give any directions in that line; yet we are so frequently asked for advice in this way, that we have concluded to offer a few general remarks.

The situation of the orchard having been decided on, the ground should be deeply plowed, subsoiled and thoroughly pulverized. The holes should be dug at least a foot larger in every direction than actually required by the roots when spread out in their natural position. In planting, the top soil should be broken down into the hole, and worked carefully in between every root and fiber, filling up every crevice, that every root may be in contact with soil, and the whole made quite firm as the filling up progresses. The tree, when planted, may in light soils stand from two to three inches deeper than it stood in the nursery; but in heavy clay or wet ground it is advisable to have it stand at the same height as it was before transplanting.

On account of our long, hot, dry summers, it is well to shade the sunny side of the tree, to keep borers out, with a board or shake, stuck in the ground, or a piece of burlap wound loose around the tree up to the limbs, top tied loose with a string. Whitewash made out of whiting or lime will also protect the tree against sunscald.

The following works, by California authors of wide experience, and written with Pacific Coast conditions particularly in view, will be found very useful to all Horticulturists:

"California Fruits, and How to Grow Them," by Prof. E. G. Wickson, \$2.50.

"The Raisin Industry," by Prof. Gustav Eisen, \$3.00.

"Grape Culture and Wine Making," by George Husman, \$2.00.

For the convenience of our customers we have arranged to furnish them at the above publishers' prices.

DISTANCES FOR PLANTING

Standard Apples.....	25 to 30 feet apart each way
Standard Pears.....	20 to 24 " "
Strong-growing Cherries.....	20 to 24 " "
Duke and Morello Cherries.....	18 to 20 " "
Standard Plums and Prunes.....	20 to 24 " "
Peaches and Nectarines.....	20 to 24 " "
Apricots.....	24 to 30 " "
Grapes.....	7 to 10 " "
Currants and Gooseberries.....	4 by 6 feet
Raspberries and Blackberries.....	3 to 4 by 5 to 7 "
Strawberries for field culture.....	1 to 1½ by 4 to 5 "
Strawberries for garden culture.....	1 to 2 feet apart

Number of Trees or Plants on an Acre at Given Distances Apart

	Square Method	Equilateral Triangle Method
Distance, 1 foot apart each way, number plants.....	43,560	50,300
" 2 feet apart " ".....	10,890	12,375
" 3 " " " ".....	4,840	5,889
" 4 " " " ".....	2,722	3,130

" 30 " " " ".....	48	55
" 35 " " " ".....	35	40
" 40 " " " ".....	27	31

RULE—SQUARE METHOD.—Multiply the distance in feet between the rows by the distance the plants are apart in the rows, and the product will be the number of square feet for each plant or hill, which, divided into the number of feet in an acre (43,560), will give the number of plants or trees to the acre.

RULE—EQUILATERAL TRIANGLE METHOD.—Divide the number required to the acre "square method" by the decimal .866. The result will be the number of plants required to the acre by this method.

PRICE LIST

of

California Nursery Co.

SEASON 1904-1905

Prices quoted herein are for quantities and sizes specified; *for extra sizes, varieties, or quantities other than mentioned, special prices will be made.* Estimates cheerfully furnished on such lists.

☞ For index, see last page of Catalogue.

FRUIT DEPARTMENT

All our Fruit Trees are grown on WHOLE Seedling roots. The advantages of these in promoting the health and thriftiness of trees over others grafted on pieces or sections of roots, or budded on stocks grown from cuttings, is acknowledged by the best authorities, and is easily apparent to the most casual observer. *All two-year-old trees are branched low and are stocky, having been cut down or headed back when yearlings, two feet above ground, except where noted.*

All of our Apple Trees and Grapevines are fumigated with hydrocyanic gas when dug, so are the buds, scions, and cuttings, prior to budding, grafting or planting out in Nursery. This positively kills any insects that may be thereon, without any injury to tree or vines. We have erected on our grounds a new Fumigating House, with three compartments, so that we can disinfect, at any time, either 50 trees or 10,000.

	Each	Per 10	Per 100	Per 1000
For the first time we offer an assortment of Apples grafted on Aphis Proof Roots (Northern Spy and Winter Majetin), Sizes and Varieties are as follows, viz.:				
1 year, ½ to ¾ in. diam...4 to 6 ft.	1 00	8 00		
1 year, ⅜ to ½ in. diam. .3 to 4 ft.	75	6 00		
1 year, ¼ to ⅜ in. diam...2 to 3 ft.	60	5 00		

		Each	Per 10	Per 100	Per 1000

JORDAN ALMOND

JORDAN ALMOND

Introduced from Spain, where they are grown largely for export. This variety sells in New York from 8 to 10 cents per pound more than any other. The Jordan is the largest, sweetest and finest flavored of all the Almonds. The kernels have a very thin skin and are plump, filling the shell, which is hard. The flavor and texture of the flesh surpasses in delicacy any other kind. Jordan Almonds are preferred by confectioners, owing to their large size and thin skins, for making salted and sugared Almonds. We sent samples grown on our own trees at Niles, to the U. S. Consul, B. H. Ridgley, at Malaga, Spain, who had three prominent dealers test them. They all pronounced them the *true* Jordan Almond. The stock we offer is all propagated from our own bearing trees that have had a full crop for the last four consecutive years.

WALNUTS

The planting of the improved varieties of the English Walnut is steadily increasing, not only in Southern California but also in the Central and Northern parts of the State, and is found as profitable as any other fruit. The trees are long-lived if planted in suitable soil, which should be deep, well-drained and capable of retaining the moisture during the summer.

PLACENTIA WALNUT

PLACENTIA WALNUT

The Santa Barbara Soft Shell Walnut is the standard from which all varieties are judged as grown in Southern California. The Placentia is a selected variety of this standard sort. The nuts are all of large size, perfect shape, smooth soft thin shell. Kernel white and sweet. It compares favorably with the French Walnuts.

Opuntia Ficus (Indian Fig Cactus)—6 in. pot	50			

ORNAMENTAL DEPARTMENT

DECIDUOUS ORNAMENTAL TREES

Trained Trees

This class includes a variety of large-sized trees, whose straight, regular stems were headed back or cut down to a uniform height of nine feet, and handsome, well-formed heads grown thereon. They are in splendid shape for planting on avenues, streets or roadsides for immediate effect. With ordinary care, little or no loss should occur in moving them, as they have been frequently transplanted.

Diameter given is four feet above ground.

	Inches in Diameter	Each	Per 10
Ash —European	4 to 6	2 50	
.....	2½ to 3	1 50	12 00

EVERGREEN TREES AND SHRUBS

Nearly all the Plants mentioned under this heading have been once or more transplanted, thereby greatly adding to the certainty of their growing. In order, also, to reduce the amount of soil and consequent freight charges, we have grown those varieties most in demand in pots. In shipping to distant points this is especially advantageous.

BAMBOOS

Bamboos cannot be too highly recommended in garden decoration. This class of plants form one of the striking characteristics of the vegetation of China and Japan, where many species occur that are hardy here in California. They thrive best in a deep, rich soil, and require plenty of water when in a growing state. Under the general name of Bamboo are included species belonging to several genera, as *Arundinaria*, *Bambusa*, *Phyllostachys*, etc.

Stock offered is very fine. Plants are bushy.

PALMS, DRACAENAS, AGAVES, YUCCAS, ETC.

PALMS

Palms have now become almost indispensable in all decorations, whether for apartments, or conservatories, or the production of tropical effects in landscapes. No class of plants make such a grand display, and none are of more easy culture. Rich soil, mulching, and watering will in a short time produce grand specimens.

While our main stock of these highly desirable garden ornaments is grown in the open ground, thereby obtaining the finest plants, we also cultivate more or less of each variety in pots or boxes. These are well-established, well-furnished specimens, suitable for hall or house decorations, or, where immediate effect is desired out-of-doors, they can be used to great advantage, being almost absolutely safe from any set-back.

CHAMÆROPS HUMILIS

BAMBOO

CHAMÆROPS HUMILIS

ROSES.

Having determined to keep fully up with the times in the propagation of this beautiful flower, we have greatly enlarged our facilities to supply the ever-increasing demand, and can now offer a collection such as cannot be found elsewhere on the Coast, and in but few other establishments on the continent. The plants offered are strong and vigorous, have been grown entirely in the open ground, and consequently will not require the careful nursing necessary to those propagated under glass in three months' time, and sold at low rates. They cannot fail to give entire satisfaction the first summer after planting. From November to March they can be shipped in a dormant state, packed in moss. For culture best adapted to each class, we refer to our Descriptive Catalogue No. 2.

The varieties we can furnish of **Standard or Tree Roses** are marked with a (*).

New and Scarce Varieties.

Price, each, 40 cents ; per 10, \$3.00 ; per 100 \$25.00.

Balduin (Helen Gould)—An excellent variety, with large full flowers of fine form ; bright glowing carmine ; a free and continuous bloomer.

Climbing Kaiserine—Strong rapid climber, throwing up shoots 10 to 15 feet high. The flowers are pure white in color, and of great substance, produced on long stiff stems.

Climbing Paul Neyron

Climbing Meteor

Climbing Bridesmaid

Climbing Marie Guillot (snow white)

Climbing Mad C. Testout

Climbing Mad Cecil Bruner

Crimson Hermosa (Gruss an Teplitz)—"The reddest of all red roses."

In color the richest scarlet, shading to a velvety crimson as the flower matures, in size it is larger than Hermosa ; very fragrant, free, strong grower, and most profuse bloomer.

Franciska Kruger—Chamoise, with rose.

Gardenia—Flowers bright yellow, changing to a cream color when open ; very fragrant, free bloomer.

Ivory—A sport from Golden Gate, with large pure white flowers.

Jubilee—A fine red rose.

Liberty—One of the finest early-flowering roses ; in color, warm rich crimson scarlet ; surpassing its rival, the well-known Meteor, in abundance of bloom, size and color.

Mrs. Robert Garrett—Large flowers and fine foliage ; buds long and pointed, opening beautifully ; color of a glowing shell pink ; very deep in center.

Madam Abel Chatenay—Light pink.

Queen of Edgely (or Pink American Beauty)—A sport of American Beauty ; color a bright pink ; flowers large and deep, cup-shaped ; very fragrant, like its parent.

Roger Lambellin—Crimson tipped with white.

Soleil d'Or—The first of a new class of roses between the Persian Yellow and the Hybrid Perpetual Antoine Ducher. Large globular flowers, varying in color from gold and orange to reddish gold, shaded with nasturtium red.

GENERAL COLLECTION.

Price, 25 cents each; per 10, \$2 00; per 100, \$18 00. Standard or Tree marked with a (*), \$1 50 each.

Pot-Grown Roses

During Spring and Summer from 5 and 6-inch pots, 35c each; \$3 00 per 10. These will bloom at once and produce an immediate effect.

 Williams Evergreen

Climbing Roses

These will be found described in the various preceding classes to which they belong. We collect them under this heading for the convenience of our patrons; They are very useful, and highly valued for training over arbors, trellises, and verandas; and as screens for unsightly objects such as fences, walls etc., they cannot be surpassed.

Baltimore Belle, Prairie	Gold of Ophir, Tea
Climbing Aimee Vibert, Noisette	Greville or Seven Sisters, Prairie
Climbing Captain Christy, Hy. Per.	Lamarque, Noisette

CATALOGUES

The following catalogues are published, some annually, others at intervals as becomes necessary, and are mailed free to customers, as soon as issued, and to all other applicants on receipt of amount in stamps named below:—

No. 1. Descriptive Catalogue of Fruit Trees, Small Fruits, Figs, Olives, etc., 4 cents.

No. 2. Descriptive Catalogue of Shade and Ornamental Trees, Shrubs, Roses, Climbing Plants, etc., 6 cents.

No. 3. Catalogue and Price List, Free.

No. 4. Catalogue of Phylloxera-Resisting American Grapes, Free.

CALIFORNIA NURSERY COMPANY,

W. V. EBERLY, Manager.

Niles, Cal., Nov. 1, 1904.

ROSES

We make the growing of Roses a specialty and test all the new varieties on our own grounds. Many of the new roses introduced in the past few years have proven very similar to old and well established sorts. Others, after careful trial, we have found lacking in vigor of growth or freedom of bloom or both. It is true, however, that several really desirable novelties have been obtained. The new classes and the new varieties which we offer for the first time will, we conscientiously believe, be found to be entire novelties and highly satisfactory additions to the most fastidious collections.

Our large stock and great variety of hardy and tender Tea Roses enables us to furnish assortments adapted to any locality, either North or South.

Intending purchasers are cordially invited to visit our grounds and inspect the plants when in bloom. In making selections we will always be ready to assist, giving our best judgment as to the varieties suitable for any particular locality. Our roses are grown entirely out of doors, either budded or grown on their own roots from cuttings and will be found hardy and vigorous. Many object to budded roses on account of the suckers they sometimes throw out, but if proper attention is paid to the planting this will rarely be an annoyance. Budded Roses should be planted sufficiently deep so that the junction of the bud with the stock is from three to four inches below the surface of the ground.

Planting and Pruning.—The ground should be thoroughly prepared and a good coat of well rotted manure spaded in to a depth of at least 15 inches. Light, sandy soils should have a coat of heavy loam or adobe worked in with the manure. When setting care should be taken to straighten out the roots and those that are bruised cut back to the sound part. Plant three or four inches deeper than they stood before and press the dirt well around the roots with hand or foot. After setting cut the tops off from ten to twelve inches above ground. Tree roses should have the branches shortened in and thinned out, so that from five to eight remain to form the head. To produce large flowers, all roses should be pruned back each season before they make any new growth; limbs should be thinned out, and those left cut back to one-third or one-half their length; a good coat of manure should be given them each winter and thoroughly worked in the soil.

Mildew.—When the plants become covered with a whitish-looking mold or dust the disease is mildew. This is generally caused by extremes of heat and cold, or by a continuance of damp, cloudy weather. The best remedy is powdered sulphur, and should be applied as soon as the disease makes its appearance. This may be done by placing the sulphur in a piece of burlap and shaking it over the plants in the morning when the dew is on.

TREE PLANTING AND PRUNING

The territory to which we now ship our trees covers a variety of climate, from the balmiest of the South to the severe cold of the North, so that we cannot give any directions, or advise as to what and when to plant.

A few "hints," however, as to what should be done in all climates will, if followed, add greatly to the success of the purchaser.

PREPARATION OF THE SOIL

The ground should be plowed at least twice, and the second plowing should be as deep as can be done, using a sub-soil plow the second time. The ground should be well drained so that no stagnant water remains about the roots.

HEALING IN TREES

On receipt of the trees a ditch should be opened in loose soil, put in the trees side by side and cover the roots with loose soil, careful that it is well filtered among the roots to keep them moist.

PLANTING

The holes should be dug at least eight inches to one foot larger in every direction than required by the roots when spread out in their natural position. The top soil should be broken down from the edge, and raised to a cone in the center in the hole to set the tree on, and the roots then brought to their natural position, while one man is holding the tree, let the other shovel in the top soil, which should be made quite fine, carefully between the roots until covered, then tamp firmly as the filling up progresses, when nearly all filled in, place two inches of fine loose soil on top.

The tree when planted may, in light soil, stand from two to three inches deeper than it stood in the Nursery, but in heavy clay, or wet ground, it is advisable to have it stand at the same height as it was before transplanting.

PRUNING

The tops should be shortened in more or less, depending on size, variety, and condition of the trees. In commercial orchards one year old trees are cut down from 18 inches to 2 feet above ground, and all side limbs are cut to one or two buds; two year old trees with formed tops should be shortened in from 6 inches to 1 foot of main stem.

No summer pruning should be done the first year, strong growing side limbs on lower part of the tree can be shortened in from 6 inches to 1 foot from stem, so that the leaves left will shade the tree.

SHADING

On account of our long, hot, dry summers, it is well to shade the sunny side of the tree, to keep the borers out, with a board or shake, stuck in the ground, or a piece of burlap wound loose around the tree up to the limbs, top tied loose with a string. White-wash made out of whiting or lime, will also protect the tree against sunscald.
